

### ***What is covered on this Price List***

This price list covers any wastes for our Solvent Recovery Plant which is in bulk and for all drums and packages

### ***What do we do with these materials?***

We primarily treat liquid wastes – as such we need to be able to pump the waste into and between our treatment tanks.

Assuming we can do this then we will recover the valuable parts as Solvent or Oil and/ or minimise the residues in both volume and hazard.

### ***How do I book in wastes on this price list?***

**Office hours 8.15am – 5.00pm Mon – Fri.**

All Loads must be booked into our works at least 24 hours in advance and can only be made with the Office. We can accept most loads 24 hours a day, 7 days a week providing they are pre-booked.

Please state producer, date of delivery, volume, price of the order and your Purchase Order Number. If you have our quote reference or T-ref please quote that also.

### ***What is not included in our price lists?***

Bulk waste loads which are non-flammable are covered on a Separate Price list: "Oil/ Water/ Sludge Treatment Plants".

The price lists are intended to cover the typical wastes or products we accept for processing. However we cannot cover the full range or variety so it is intended to provide guidance – a customer will know their material far better than us in the majority of cases and they should be able to fit the waste into one of our categories. If not then send us as much information as possible as to what the waste is, what it was used for and we will be able to help.

There are some materials **we will not accept** at all in the waste coming onto our site, these include:

- Any air or water reactive materials
- Any oxidiser or oxidising waste/ material
- Any acidic waste with a pH <2.0
- Any material which would react with or is incompatible with solvents or oils
- Any radioactive wastes

We can arrange for third party disposal of such materials and undertake all the appropriate transport and documentation.

### ***Do we have any surcharges?***

1. We have a drum surcharge for containers that are plastic of £5 per 205 litre container and £3 per can – unfortunately they are not recoverable – hence the surcharge.
2. If a material is described as a liquid and is found to be a solid or sludge, or have more than 4% solids present then a surcharge will apply.

We cannot treat solid wastes and sludge's that we cannot get into the process; our price list is therefore split into two parts to reflect this. If we cannot empty more than 96% of the waste in the container into our tanks then the portion that remains will be charged as sludge or solids pro rata unless otherwise agreed.

3. Same day bookings (and those received after 5pm on previous day) will incur a surcharge of £25.00. Those not booked in at all will have a booking surcharge of £50.00 per load if we have the capacity to accept the load.
4. Where the waste material and/or load have to be rejected as a result of non-conformance / mis-description then we will charge a **£ 150 rejection fee** to cover our technical and our assessment costs.

### ***Where are the prices to have the materials recovered for a customer to re-use?***

We need to know and agree what the material is and to what specification the customer wishes to re-use a solvent or oil before we can provide a quote. In all cases it will be much more cost effective than disposing and using virgin material.

## LIQUID WASTES

Code SRS: Recoverable Solvents for Thinners or Gunwash		
Package Type	Price per unit	Typical Description:
IBC's (1000 litres)	£ 115	
Drums (200 litres)	£ 22	
Cans (25 litres)	£ 4.50	
Cans (5 litres and under)	£ 2.50	
Bulk – Tankers	£65 per tonne	

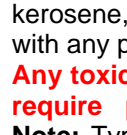

Highly Flammable Waste Solvent Mixtures - Paints, Lacquers, Ketones (MEK, Acetone), Acetates (Butyl Acetate), Hydrocarbons (Toluene, Xylene, Petrol, Avgas), Cleaning Solvents – **Max water content 10%**  
**All other solvent mixtures suitable for Recovery To Gunwash / Paint Thinners.**

Code SKF: Solvents for Kilnfuel (for cement kilns or High Temperature Incinerators)		
Package Type	Price per unit	Typical Description:
IBC's (1000 litres)	£ 160	
Drums (200 litres)	£ 29	
Cans (25 litres)	£ 6.75	
Cans (5 litres and under)	£ 3.35	
Bulk – Tankers	£98 per tonne	

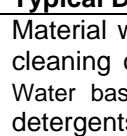

Highly Flammable Waste Solvent Mixtures not suitable for recovery - Water Miscible Solvents E.g. Alcohols, Glycols, IPA, IMS. Most Ink Solvents, all liquid styrene's (must be inhibited) are included in this category  
**Water Contents must be less than 25%, Chlorine Contents less than 3% and no toxic compound other than Methanol to be present – if higher levels ring for a price**

Code SFA: Flammable Aqueous Wastes i.e., flammable materials with a high water content		
Package Type	Price per unit	Typical Description:
IBC's (1000 litres)	£200	
Drums (200 litres)	£ 34	
Cans (25 litres)	£ 10	
Cans (5 litres and under)	£ 5	
Bulk – Tankers	£125 per tonne	

Material with flash point below 40°C or material rejected by our Oil or Water Plant or which does not meet the above 2 descriptions – incl Developers, Fixers and antifreeze  
**Any toxic compounds present will require a survey form**  
**Note:** Typically these materials have over 70% water contents

Code SOD: Oil Based Wastes (non flammable)		
Package Type	Price per unit	Typical Description:
IBC's (1000 litres)	£ 95	
Drums (200 litres)	£ 13	
Cans (25 litres)	£ 3.35	
Cans (5 litres and under)	£ 2.30	
Bulk – Tankers	See our Oil/ Water Price List	

Material with flash point above 40°C which contains oils, diesel, kerosene, avtur, Blanket wash, white spirit, these can be mixed with any proportion of water  
**Any toxic compounds other than used Engine Oil present will require pre-approval - Oil Filters are priced separately**  
**Note:** Typically these materials have over 70% water contents – Chlorine Content must be < 0.1%

Code SWB: Water Based Wastes (non flammable – no oils); pH 2 – 12		
Package Type	Price per unit	Typical Description:
IBC's (1000 litres)	£ 180	
Drums (200 litres)	£ 34	
Cans (25 litres)	£ 9.25	
Cans (5 litres and under)	£ 4.35	
Bulk – Tankers	See our Oil/ Water Price List	

Material with flash point above 40°C which contains water based cleaning compounds and others e.g. Water based paints and inks, Water based cleaners, spent corrosive washings (ph 2 to 12), and detergents are acceptable but pH must not be outside this range.  
**Any toxic compounds present will require a survey form**  
**Note:** Typically these materials have over 70% water contents – if material is a sludge then our sludge prices apply if we cannot empty containers

Code SCS: Chlorinated Solvent Based Wastes (non flammable)		
Package Type	Price per unit	Typical Description:
IBC's (1000 litres)	£ 168	
Drums (200 litres)	£ 33.50	
Cans (25 litres)	£ 8.75	
Cans (5 litres and under)	£ 5.50	
Mixed chlorinated / flammable solvents (200l)	£130	
Bulk – Tankers	Price on application	

This only applies to single chlorinated streams of Methylene Chloride (Dichloromethane), Trichloroethylene (Trike) or Perchloroethylene (Perc)

***NB any single stream solvents with low solids i.e., toluene, acetone or methanol in drums or bulk tanker may be taken free of charge. The same applies for petrol / diesel mixes.***

## SOLIDS AND SLUDGE WASTES

A solid or sludge is a material which we cannot or will not take into our process as the waste, **or part of it**, would cause us handling problems – we would therefore transfer the waste to third party sites.

We are often asked what this means? – if a drum or container has gloves, rags, metal, parts, helmets, cans, plastic cups, bottles, tins, powders, (and yes we have seen them all ! ) then they have solids in we cannot process. At the very least those parts will be charged as below. If a drum could be emptied by a vacuum tanker and discharged without pressure through a 1” line then it is not a solid or sludge in this sense – it should be transferred to us by tanker and the liquid waste prices (which are in any case a lot lower) would apply.

Code <b>SDP</b> : Solids/ Sludges– may be <b>FLAMMABLE &amp; NON- PUMPABLE</b>		
Package Type	Price per unit	Typical Description:
IBC's (1000 litres)	£ 550	 
Drums (200 litres)	£ 110	
Cans (25 litres)	£ 13.00	
Cans (5 litres and under)	£ 7.50	
<b>Bulk – Tankers</b>	<b>Not Applicable</b>	Sludge's which cannot be emptied using a standard emptying line – typically the sludge will be so viscous that the contents of the drum could not be manually stirred and will require specialist handling, pumps etc. Gloves, rags, metal, parts, cups etc contaminated with Paints, Inks, Adhesives, Resins, Oils and other materials Filter Cakes. Bitumen's, Tars, Resins and Paints activated, Rags, Spill Kits, Granules Can include highly flammable solvents <b>Most open-top drums will be at this price</b>

Any non hazardous wastes as solids would be priced per job

## PALLETES

We used to price pallets based on the particular wastes that they contained and whether they were liquid or solids etc. We have changed this policy as we found that many loads were not accurately described and in some cases we have to send pallets to specialist companies to process and sort.

We now have a flat price for pallets of waste as below. The pallets must be safe for transport, weigh less than 1 tonne and not be stacked more than 70 cm high. No incompatible materials to be included on the pallet and the contents of the pallets will still need to be individually identified to meet carriage and waste regulations.

Code <b>PAL</b> : Pallets of wastes		
Package Type	Price per unit	Typical Description:
Pallets	£ 360	Any waste that has been included as an acceptable waste on this price list. Liquids only. A pallet can only contain cans up to 25 litre in size.  <b style="color: red;">Note that Waste Regulations do not allow the mixing of non-hazardous and hazardous waste on the same pallet. If the pallet has both types on we will have to test and sort – we will charge an additional £80</b>

Code <b>SDA</b> : Aerosols		
Package Type	Price per unit	Typical Description:
IBC's (1000 litres)	£ 360	
Drums (200 litres)	£ 100	
		Aerosols of paints or consumer products containing propellants. solvents <b style="color: red;">Any toxic compounds present will require pre-approval</b> <b style="color: red;">NO AGROCHEMICAL, PESTICIDE, EXPANDING FOAM OR CLINICAL aerosols</b>

## EMPTY CONTAINERS

Code EC: Empty Containers		
Package Type	Price per unit	Typical Description:
IBC's (1000 litres)	£ 34	A nominally empty drum is a drum that contains less than 0.5% of its product  <b>Any toxic compounds present will require pre-approval</b>  <b>This price only applies if a drum is consigned to us as "Empty Container"</b>
Metal Drums (200 litres)	£ 5.50	
Metal Cans (25 litres)	£ 2.25	
Metal Cans (5 litres and under)	£ 1.10	
Plastic Drums (200 litres)	£9.75	
Plastic Cans (25 litres)	£4.35	
Plastic Cans (5 litres and under)	£3.35	

Supply of Reconditioned Containers		
Package Type	Price per unit	Typical Description:
Drums (200 litres)	£25	Fully reconditioned metal tighthead or openhead (clip top) drums
IBC's (1000 litres)	POA	Plastic intermediate bulk container (1 tonne)
Drums (200 litre)	£ 10	Washed internally drums – not suitable for any products. May be discoloured on outside

Exceptions		
Package Type	Price per unit	Typical Description:
IBC's	£ 150	Oil filters
Drums (200 litres)	£ 25	Oil filters

## WEIGHT TICKETS

We will normally weigh loads coming in using the site Weighbridge. Alternatively, the weight can be estimated from litres or gallons, which the driver would know and have agreed with the site from which the material was collected. If there are multiple collections where loads were not/ weighed at a producer's site then we will use the weights on the tickets if the total for the loads are greater than the weight ticket.

The tonnes arrived at will then be used for charging purposes using the agreed price per tonne.

## ENVIRONMENT AGENCY HAZARDOUS WASTE CHARGES

A requirement of the Hazardous Waste Regulations 2005 is that the disposal sites receiving wastes pay the Environment Agency a fee for each consignment they receive. The regulations allow the sites to recover the costs for this and the administration costs from the consignor of the waste.

If we are undertaking the transport then all the hazardous waste consignment costs and fees are included. If we are not doing the transport then waste reception fees are payable as £55 per single consignment and £25.00 per multiple consignment.
