

# PERFORMANCE REPORT

## ANSS Swarf Handling System – Multiskilled Services

In 2018, Augean North Sea Services supplied, installed and operated a swarf handling system on a drilling rig in the UK (North Sea Sector).

Augean already had the drilling waste management equipment on the rig and supplied the swarf handling equipment, as part of the multiskilling and additional services approach to our customer.

### Key Operational Data:

13mt of swarf recovered with zero NPT

No LTI were recorded during the operation

600ft of 9-5/8" casing was milled

Flow rates from 700-750 GPM

ROP controlled at 2ft-4ft per/hr

Mud Weight of 11.5 PPG

Operational time of 192 hrs was recorded

### Key Customer Benefits.

ANSS multiskilled and proactive crew of 6 engineers covered swarf handling operations, pit cleaning activities, operating the ANSS drilling waste management equipment along InfraCal Analysis for contaminated and discharge of wellbore fluids for the Abandonment phase.

The customer benefited from ANSS unique and proactive multiskilling approach with reduced POB on the rig, as swarf handling operations tend to have dedicated personnel for swarf operations only.
