

CS-PFR-18-2 Decommissioning of TAQA Exhaust Stack

Executive Summary

TAQA commissioned Augean North Sea Services (ANSS) to provide Complete Waste Management Services for any and all of their UKCS assets, including the provision of decommissioning and NORM decontamination services.

Project Scope

ANSS were contracted to supply cleaning and recycling services for the TAQA Tern Exhaust Stack.

The item was transported directly to our dedicated PPC and RSA Permitted decommissioning and NORM decontamination facilities in the Port of Dundee for the removal and disposal of any potential contaminants and ultimately the recycling of the exhaust stack.

Solution

- Quayside tandem lifts of heavy equipment, executed in partnership with OilMac, directly from the MV Enea vessel to ANSS permitted laydown area in Dundee.
- ANSS transported heavy equipment along the port to our decommissioning and NORM decontamination facility.
- Inspection and monitoring completed by ANSS RPS in a controlled area provided for any potentially contaminated components.
- Exhaust Stack were cleaned of any carbon prior to dismantling and recycling.
- All contaminated waste repackaged for final disposal.

Result

ANSS on completion of the decommissioning of the exhaust stack met all requirements of the scope provided by the client. Using their multi-skilled operatives, Radiation Protection Supervisors and specialist waste personnel they completed on schedule with no LTIs.

Complete Waste Services For The North Sea

-  Drilling & Well Abandonment Waste Management
-  Decommissioning Services
-  Industrial & Marine Services
-  Waste Services

Achievements

- NO accidents, incidents or injuries – Continuing our 2+ years LTI free company wide.
- No environmental incidents occurred during the project carried out at ANSS Dundee Decommissioning Centre.
- ANSS successfully resourced, planned, scheduled and managed the workscope within the critical path, utilising collaborative partners such as Forth Ports and Robertson's Metal Recycling to deliver sector-leading service.
- Upon thorough investigation, 1 x Exhaust stack cleaned and prepared for safe recycle.
- 100% recycling of decontaminated equipment achieved.
- Controlled and minimized potential risk of exposure to NORM contaminants during detection, containment removal and disposal.
- Ensured full compliance with legislation and procedural adherence for workscope.
