

# PERFORMANCE REPORT

## CS-PFR-14-4 NORM Repackaging & Disposal

**Work scope** - Following the Decontamination of a separator vessel for our client at their site in (December 2014) Augean North Sea Services (ANSS) were contracted with the disposal of all contaminated NORM waste and internal components that had been removed from the vessel during a maintenance shutdown.

**Solution** - Using specifications constructed by our team at head office, specialised individuals and the equipment necessary for the consolidation of contaminated waste and vessel internals were mobilised. Work commenced using carefully constructed risk assessments and work instructions to meet our client's environmental friendly requirements.

**Results** - With the use of specially modified equipment, they consolidated contaminated waste from Drilling waste containers into bio-degradable disposable bags. As stated within the approved work scope these were sent for compliant final disposal at licensed Augean Landfill site.
